Female ends

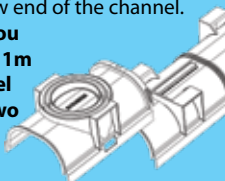

EasyDRAIN™ Compact - No need for a connector!

Step 2
Trim the ends with a Stanley knife so that the ribs are neat and all excess plastic is removed.

Step 3
Rotate the 200mm section so that the female end now matches up with the rib at the new end of the channel.
Now you have a 1m channel with two male ends.

Step 4
Flip the channel to the right way up and clip the grate back into position. Now the channel and grate can be connected to the corner components on each end.
