

CARING FOR QUARTZ SINKS

To assist in maintaining and extending the life of your new Everhard Quartz sink we have compiled a list of important tips on how we recommend you look after it

DO

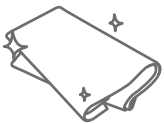

ROUTINE

Clean your quartz sink on a regular basis using dishwashing liquid. This will improve the look of your quartz sink.

RINSE

After use, rinse your quartz sink thoroughly with clean water to remove any chemicals, iron deposits or acids on the surface.

DRY

Wipe your quartz sink dry using a dry cloth after every use to keep the quartz fresh and spot free.

DON'T

ACIDS + CLEANERS

Fruit juice contains citric acid which can mark the quartz if left to dry. Cleaning chemicals used around the home can contain chloride which can cause surface rust on the stainless steel waste if left to dry. Remove all juices and chemicals left on the surface with clean water and dry the surface with a soft cloth.

SOAKING

Avoid leaving damp sponges or cloths inside the bowl or around the edge of your sink when not in use.

MARKS + SCRATCHES

The Quartz sink will be impacted by everyday use, which can result in marks and scratches to the surface. To remove any marks and scratches, use dishwashing liquid and a scotch-brite green scrubbing pad by pressing down lightly on the surface and gently scrubbing in a circular motion. Rinse with clean water and dry the surface with a soft cloth.
